

Incab

Green Light to Sustainable Development

At Incab, we believe that upholding core values of sustainable development is part of our corporate responsibility. This includes launching and maintaining a lean production system and manufacturing processes with regard to the environment, our employees, and also our customers' own sustainability aspirations. The availability of sustainable products is just one result of this.

Sustainability for me is like a facet on a diamond. Each facet represents a value that I cherish. This means that I must lead my company to operate in ways that keep our environment clean and ensure that we pass on an even better world to future generations.

”

Mike Riddle
President

Moving towards global sustainability

Through developing our production sites in the US and Europe, we are committed to honoring our core values of sustainable development and reaching our sustainability goals in order to operate in line with global environmental standards everywhere we do business.

Caring for the planet
and for our employees'
well-being and safety
is one of Incab's
central values.

Lean Production

Recyclable and reusable wastes

Reusable packaging
(wooden and steel reels)

Continuous improvement
of technologies and
materials along
the product life cycle

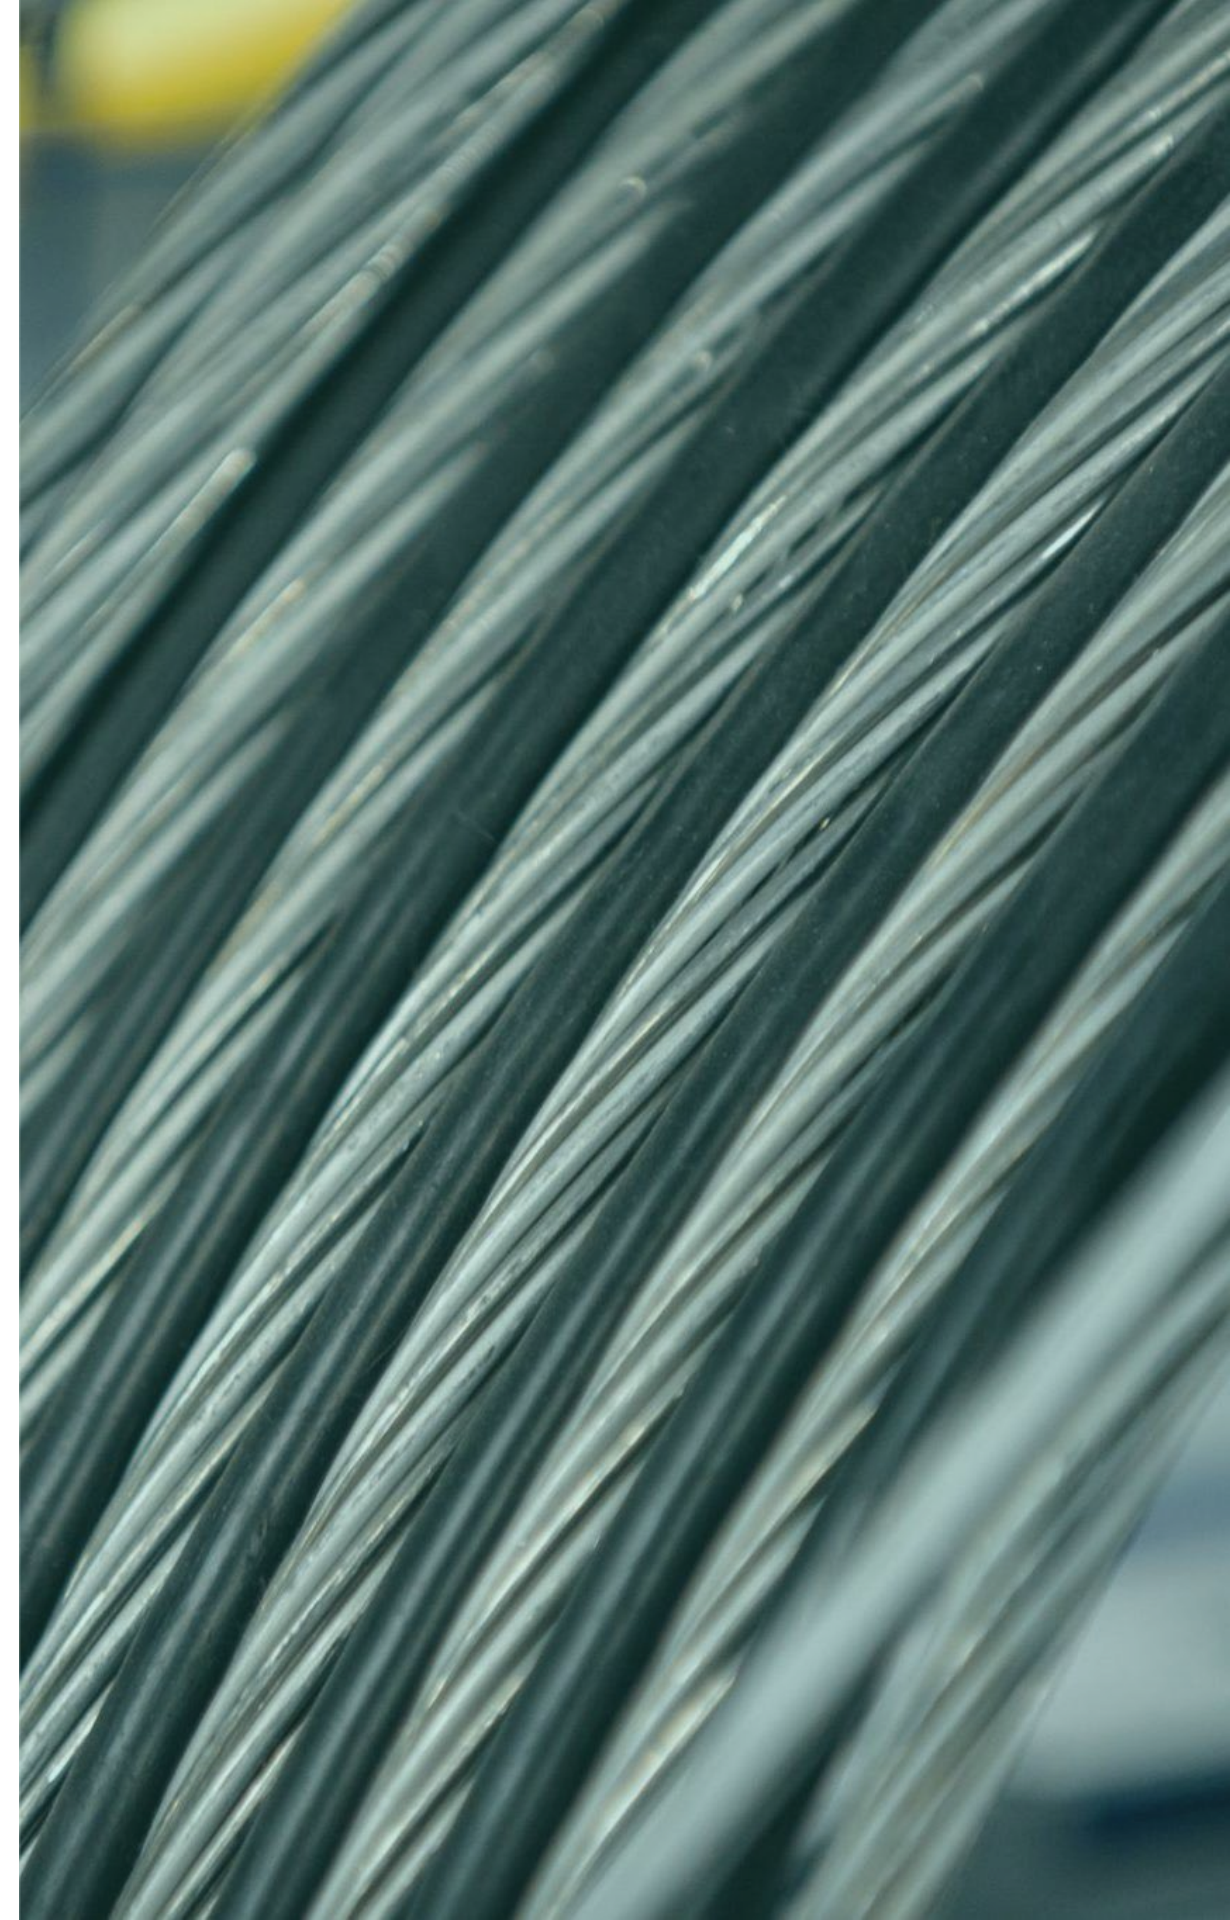

Incab environmental management
system and health and safety
management system are certified
according to ISO 14001:2015 and
ISO 45001:2018 by TÜV Thuringen

Steps towards sustainable development

Product

- Cables do not emit toxic substances during their service life
- Long product life cycle (some designs up to 50 years)

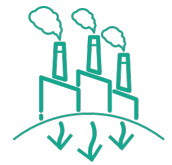

Steps towards sustainable development

People, Culture, Organization

- Variety of personal protective equipment to choose from: ease of use while maintaining safety
- Creating a balanced environment

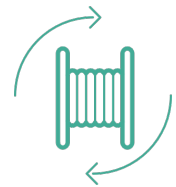

Sustainable development goals

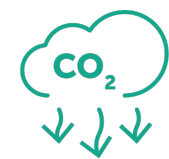

Reduce production emissions

Reduce wastes

Reduce packaging
(reel-less cable coils)

Reduce carbon footprint (development of local production sites)

Based on the best available technology, our target is to have the lowest possible environmental impact and minimize it each year.
